1. Wiki Site Description

This document intends to cover the deliverable D6.2 – Wiki Site which is supposed to gather information related to the SOMEDI project repository.

As part of the consortium operational management, HIB is hosting a repository for the exchange of information internally among the project partners. The repository is developed through Alfresco, a content management system that provides the fastest way to interact with information in an open, modern and secure manner.

The repository is accessible via [http://repo.hi-iberia.es:4540/share/page/](http://repo.hi-iberia.es:4540/share/page/) and its structure can be summarized in the following lines:

- Dashboard is the main page of alfresco share (home). From the top menu you can access to sites, edit your profile and more typical options. Also there are some dashlets that give information about alfresco share activity.

![Alfresco Dashboard](image)

- When you click in the SOMEDI Site, it is possible to see the activity of the site, files modified, user members and their role. The most important functionality is the “document library” in the right top of the page where you can see the tree folder structure by Work Package.
Then for each WP, we have a deliverable structure and here everybody with permissions can upload, delete and create files. Files can have version control system too.

For permissions and roles in the repository we have 2 types of users:
- Managers – people from HIB
- Collaborators – rest of project partners
